

## **eGIS Associates launches new Training Bytes program to help you stretch your training dollars.**

Geospatial technology is ever-changing and the only way to stay current is to keep your skills up-to-date with training. In this economy; however, training budgets are tight and you need to get the most out of every training dollar. eGIS Associates has launched a new program that will help you get even more...

eGIS is excited to announce Training Bytes, our new training credits program. Training Bytes will allow you and your organization to save 15% on any training class by using pre-purchased training credits to register for a class. They may be used to purchase seats in any regularly scheduled training class hosted by eGIS Associates, including:

- Traditional Instructor-Led Classrooms
- Instructor-Led eCourses
- Self-Paced eCourses

*“We all know that budgets are tight right now, but technology keeps changing and it is critical for GIS professionals to keep their skills sharp. It is our hope that our new Training Bytes program will help our clients make the most of their available training budget.”* says Tripp Corbin, CEO and Lead Instructor for eGIS Associates.

How does the program work? Training Bytes may be purchased in blocks of 100 credits at a rate of \$85.00 per block. When redeeming Training Bytes, one credit equals one dollar. For example, a class listed for a price of \$1,000.00 can be redeemed with 1,000 credits purchased for \$850 (thereby saving 15% from list). You can buy as many blocks of Training Bytes as you wish, as often as you want.

Certain restrictions apply. For more information, please visit the eGIS Training Bytes webpage at <http://www.egisassociates.com/training-bytes.html> or email the eGIS Training Team at [training@egisassociates.com](mailto:training@egisassociates.com).

### **About eGIS Associates, Inc.:**

eGIS Associates, Inc., an Esri Silver Partner, is focused on providing efficient and cost effective Geospatial Solutions that meet the growing needs of public and private sector enterprises. Our mission is to help our customers consume the Power of Place with current technology standards and Applied Spatial Intelligence ©. eGIS maintains credentialed staff in multiple Geospatial and IT disciplines to serve the range of needs of our clients. Our “tool kit” of resources includes mobile training labs and a host of state-of-the-art technology to aid in providing high quality and cost-effective results.
